

Reading the evidence 1

Look at the pieces of evidence that you have been given and then answer the following question:

Is this discovery of historical significance? Your answer needs to be at least 100 words long and include sound reasoning backed by physical evidence.

“We were amazed that Adam wasn’t remotely upset about being lost. His biggest concern was that he could take the dinosaur with him! Of course, we told him we’d have to check with the Namib government as it was discovered in a protected area.” *Rescue Operations Leader, Mostert Mjabe.*

How does the evidence impact your findings? How do you know when you have enough evidence? What is the responsibility of historians, archaeologists, anthropologists when they write history?

Reading the evidence 2

Look at the pieces of evidence that you have been given and then answer the following question:

Is this discovery of historical significance? Your answer needs to be at least 100 words long and include sound reasoning backed by physical evidence.

“Hi this is Toni, Adam’s mom and I’m just responding to some of the negativity surrounding my child’s dinosaur discovery. So I just want to say that we didn’t mislead the public intentionally.. actually it was probably the newspaper that kind of blew everything out of proportion... so ja ... I apologize for getting everyone so excited about Adam’s dinosaur discovery. Actually it was not a real dinosaur ... it was obviously something that somebody had dropped out in that sand dune at some earlier stage. What we really are very grateful for, is the support we were shown by the rescue team that came and helped us find Adam in the dunes, the next day.”

Transcript of voice message sent by Toni Lee to the local radio station.
